Privacy Policy — Personal Upload Scheduler

Last updated: 14 August 2026

Who this covers

Personal Upload Scheduler ("the tool") is a private command-line application used by a single individual to publish their own videos to their own YouTube channels. The tool is not distributed and has no users other than its author.

What the tool uses

The tool uses **YouTube API Services**. By using it, its operator is agreeing to the YouTube Terms of Service.

Google's handling of data is described in the Google Privacy Policy.

Document	URL
YouTube Terms of Service	https://www.youtube.com/t/terms
Google Privacy Policy	https://policies.google.com/privacy
Revoke this tool's access	https://myaccount.google.com/permissions

What data the tool accesses

The tool accesses only the author's own YouTube account, and only to:

- upload a video file that the author created and owns;
- set that video's title, description, tags, category, thumbnail and scheduled publish time;
- read back that same video to confirm the upload succeeded;
- add that video to a playlist on the author's own channel.

The tool does not collect, store, process or transmit personal data belonging to any other person. It does not read other users' videos, comments, subscriptions, watch history or channel data. It performs no analytics, profiling, advertising or tracking. It has no database and no server.

Where credentials are stored

Authentication uses OAuth 2.0. Access and refresh tokens are stored in files on the author's own computer. They are not uploaded, shared, sold or transmitted to any party other than Google's own API endpoints during authentication and API calls.

Revoking access

Access granted to this tool can be revoked at any time at <https://myaccount.google.com/permissions>

Data retention and deletion

Locally stored tokens can be deleted at any time by deleting the token files, which immediately ends the tool's ability to act on the account. No other data is retained, because none is collected.

Third parties

No data is shared with any third party. There are no analytics providers, advertising networks, or sub-processors.

Changes

Any change to this policy will be published on this page with an updated date.
